

Sri Krishna Collection

Project Description & Development Guide

Project Overview

Sri Krishna Collection is a production-ready women's fashion e-commerce website built using Java 21, Spring Boot 3, Spring Security, JWT, Hibernate (JPA), MySQL, Thymeleaf, HTML5, CSS3, JavaScript, and Bootstrap 5. The application must follow MVC architecture, SOLID principles, clean code, layered architecture, DTO pattern, repository pattern, and enterprise-level best practices.

Core Features

- Authentication & Authorization (JWT, Spring Security, BCrypt, Role-based access)
- Customer registration, login, profile management
- Product catalog with categories, search, filters, wishlist and cart
- Checkout, Razorpay/COD payment, order tracking
- Admin dashboard to manage products, stock, orders, customers, banners, coupons and reports
- Responsive UI with peacock-themed animations and premium design
- Validation, exception handling, logging, Swagger API documentation

Recommended Project Structure

src/main/java/com/example/srikrishna/
config, controller, service, service/impl, repository, entity, dto, mapper, security, validation,
exception, util, constants

src/main/resources/
templates/, static/css, static/js, static/images, static/uploads, application.properties

Database Tables

users, roles, user_roles, categories, sub_categories, products, product_images, product_variants, inventory, cart, cart_items, wishlist, orders, order_items, payments, addresses, reviews, coupons, offers, notifications, banners, audit_logs, refresh_tokens.

Instructions for Claude AI

Use this document as the single source of truth. Generate the project module by module. Never generate the entire project at once. Follow the folder structure exactly. For each module provide Entity, Repository, DTO, Mapper, Service, ServiceImpl, Controller, HTML, CSS, JavaScript, SQL, Validation, Security configuration, and testing where applicable. Maintain clean architecture, enterprise coding standards, reusable code, comments, and production-ready quality. Wait for confirmation before proceeding to the next module.
